Motivated Computer Science student seeking to leverage programming skills and gain hands-on experience through internships or part-time roles in software development or data science.

EDUCATION

American University of Sharjah

Bachelor of Science in Computer Science | Fall 2023 – Spring 2027

GPA 3.94 / 4.0

Abu Dhabi Indian School

CBSE, Science stream | April 2012 - March 2023

EXPERIENCE

IT Intern – AI & Metaverse Systems

Sand Dynamics — *May 25 – July 26, 2025*

Learning-focused internship involving exposure to AI and metaverse platforms, assisting with testing, debugging, documentation, and gaining insight into conversational AI, robotics integration, and real-world technical workflows.

AI & Automation Intern

Cybergate — *June 3 – August 3, 2026*

- Extended an existing AI-powered RFP Proposal Generator: added OCR support for scanned documents, Excel-based RFP handling, and automatic detection of compliance tables, and improved output accuracy and relevance through prompt refinement.
- Improved an existing Individual Development Plan (IDP) Generator by adding a computer vision-based method to read employee competency data and a semantic (meaning-based) matching system to recommend more relevant training and certifications.
- Designed and built a new automation tool for the security team that converts spreadsheet-based threat hunting findings into standardized reports, reducing manual report writing.
- Diagnosed a server issue causing AI model crashes, and supported deployment of these tools using Docker and Git-based version control.

PROJECTS

- Flight database management system – Developed a database management system using Python and MySQL to help airports efficiently manage passenger details, flight information, and related records.

- Built models to predict the Customer Lifetime Value (CLV) for insurance customers by analysing various input variables and applying multiple regression techniques in Python as part of an introductory Data science and AI course.
- Developed a full-stack salon and spa booking web application using HTML/CSS and Bootstrap for the responsive frontend, JavaScript for interactive UI functionality, Java Servlets and JDBC for backend processing, and MySQL for user accounts and booking data storage. Features included user account management, authentication, appointment booking, and contact form handling.
- E-Sports Tournament Management System - Built a desktop GUI application to manage tournament operations including players, teams, matches, and sponsorships across a 15+ table relational Oracle database

SKILLS

Programming Languages.

Python, C++, C, MATLAB, SQL (MySQL, Oracle), JavaScript, x86 Assembly, Java

Web Development

HTML, CSS

AI & Machine Learning

vLLM, Ollama, OpenCV, OCR (Tesseract), Deepseek R1, Gemma, FAISS, ChromaDB

Concepts & Paradigms

Object-Oriented Programming (OOP), Data Structures and Algorithms, Computer Networks, Database systems, Operating Systems, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering,

Libraries & Frameworks

Pandas, NumPy, Scikit-learn, Bootstrap, Jakarta Servlets, JDBC

DevOps & Tools

Docker, Git, GitLab, Azure DevOps, Linux/Server Environments

HONORS

Dean’s list – American University of Sharjah – Fall 2023 – Present
Chancellor’s list – American University of Sharjah - Spring 2024, Spring 2025, Spring 2026
Merit - based scholarship Fall 2023 - Present
